This course will look at findings that will enhance the emotional well-being of children and adolescents at school. Topics will focus on students, teachers, mental health personnel, administrators, families, and others impacting the child and his/her school needs. The emphasis is on practical clinical information and skills based on current research, including evidence-based practices and innovative learning strategies. This course is designed to help the participant identify the gaps/problems in practice needed to promote learning, resiliency, and social and emotional growth, as well as to support and enhance collaboration. The course will offer didactic lectures, case studies, Q&A, and panel discussions and is intended for mental health and health clinicians, educators and administrators, researchers, and others interested in the development and treatment of school aged children and adolescents. **Learning Objectives:** Upon completion of this activity participants will be able to: describe how to best work with undocumented, urban, or special needs students; promote strategies to help students process information, heal after a crisis, and control anger; develop models to help children who have experienced trauma, are anxious and/or depressed, or are drug and/or alcohol abusing; and explain effective methods for working with school systems and promoting peace.
