

Frank Schlüter

Frank Schlüter

Senior Material Compliance Engineer

TRATON AB

As an engineer for Design for Environment, Frank has worked for over 28 years in the Heavy Duty Vehicle (HDV) industry at Scania R&D as Senior Material Compliance Engineer at the Homologations and Product Compliance department. Since July 2025 he is working for TRATON AB with its brands Scania, MAN, International and Volkswagen Truck & Bus. He is representing TRATON in several automotive industry working groups on product-related, environmental issues like Taskforce REACH and ACEA Working Group Circular Economy. Since in some areas of Material Compliance and Circular Economy the HDV OEM product use, design and company interests are differing significantly from those of the passenger vehicle OEMs, he tries to establish and often chairs then himself those specially created HDV expert groups or taskforces (like ACEA TF HDV) to discuss HDV specific issues there. His passion is to convert legal requirements into IT requirements and developing IT systems providing full process automation (like for SCIP). Today he works intensively as chair of the IMDS workgroup HDV with the business requirements on implementation of RoHS requirements on Electrical and Electronical Equipment into IMDS to further extend the systems usability to non-automotive product categories. He is looking forward engaging in HDV OEM suitable IT solutions for dismantling information under upcoming ELVR and maybe future digital Passports for HDV and more.
