

CyberMUG: Cybersecurity Modules aligned with UG Computer Science and Engineering Curriculum

PIs: Ahmad Y Javadi¹, Quamar Niyaz², Xiaoli Yang², and Sidike Paheding³

Student Researchers: Sai S Sudha¹, Jyothirmal Bandreddi¹, Bhanu Cherukuri¹, Kenny Guernsey², Jansen Tan², Jacob Tietz², Mateo Garcia², Gabe Silva², Divya Ravindra², and Abel Reyes³
¹The University of Toledo, Toledo, Ohio, ²Purdue University Northwest, Hammond, Indiana, ³Michigan Technological University, Houghton, Michigan

Award # 2021264 and 2021345

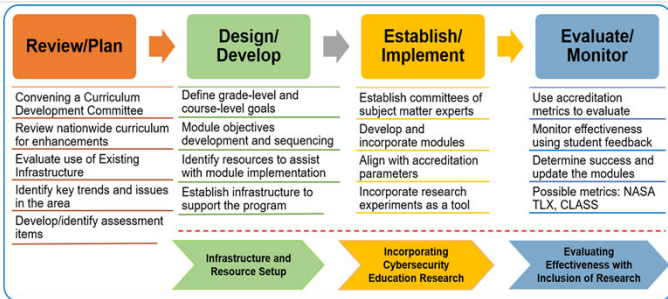

GOALS

- Introduce cyber-secure design and development practices to minimize vulnerabilities during system design rather than the addition of security measures as an after-thought
- Develop a security mindset at the undergraduate level with a focus on learning how intertwined cybersecurity is with any computation related activity/work/job
- Inculcate interest in cybersecurity careers with a long-term goal of addressing the national shortage of cybersecurity skills.

RESEARCH QUESTIONS

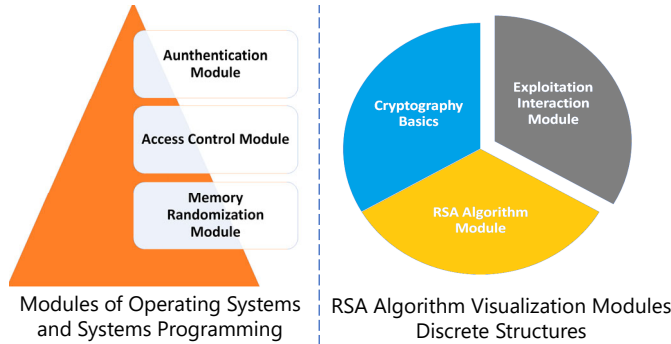

- What courses in the curriculum are most effective for cybersecurity?
 - What aspects of such modules capture students' interest?
 - Do these modules help students grasp the role of cybersecurity in particular CE/CSE courses?
- Does the addition of these modules improve student participation?
 - What are the effects of these modules on cybersecurity learning
 - Does the integration of cybersecurity modules increase students' interest in pursuing cybersecurity as a career?

CYBERMUG PLAN

METHODOLOGY

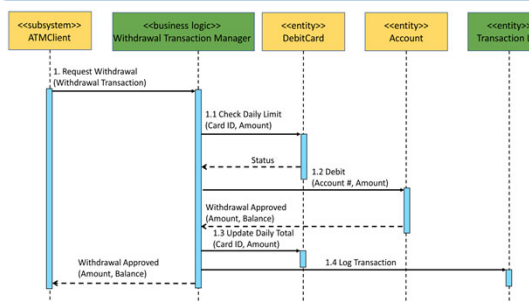

Course	Tool/Module Developed
Discrete Structures	Cryptography and RSA Algorithm Visualization tool
Operating Systems	Mini Project-based module using xv6
Software Engineering	Implementing security in SDLC
Intro to Programming	Secure Programming in C++ & Java through Practice Oriented Modules

SDLC Phases	Regular tasks	Secure software tasks
Requirements	<ul style="list-style-type: none"> Functional Requirements Use cases 	<ul style="list-style-type: none"> Security Requirements Abuse cases
Design	<ul style="list-style-type: none"> Static and Dynamic Modeling 	<ul style="list-style-type: none"> Architectural Risk Analysis Security-oriented Design
Implementation	<ul style="list-style-type: none"> Coding 	<ul style="list-style-type: none"> Code review
Testing	<ul style="list-style-type: none"> Functional Testing 	<ul style="list-style-type: none"> Risk-based Security Tests Penetration Testing

SDLC phases integrated with security-related tasks in Software Design

RESULTS

Sequence Diagram of Banking service to withdraw funds with secure component developed in Software Design

How to Avoid NullPointerException?

- Ensure that all objects are initialized properly before they are used.
- It's good practice to avoid default constructors, when using a constructor with parameters. It ensures the user initializes the object that the variables within with values that are expected.
- Check to see if object is null before using it
 - Object.isNull()
 - Objects.isNull(object)
 - Objects.nonNull(object)

Null pointer module for Java in Intro to Programming course

Code snippet for parameter mismatch module for C++

```

// Called from a main function
short sum = add(x, y);
cout << "Sum: " << sum << endl;
short difference = subtract(x, y);
cout << "Difference: " << difference << endl;
short product = multiply(x, y);
cout << "Product: " << product << endl;
long quotient = divide(x, y);
cout << "Quotient: " << quotient;
// Function definitions
double add(short x, short y) {
    return x + y;
}
short subtract(short x, int y) {
    return x - y;
}
long multiply(short x, char y) {
    return x * y;
}
float divide(double x, double y) {
    return x / y;
}
    
```

Implementation of the access control module in xv6 of Operating Systems and Systems Programming course

Example menu screens in the RSA/Cryptography tool

Pre/post improvement using the RSA Cryptography module

Pre/post improvement using secure programming module

CONCLUSION / FUTURE WORK

- More case studies will be added to the framework of Software Engineering and usability be assessed by students
- Java/C++ modules to be revised in response to student feedback
- Behavior of implementation of modules in xv6 found to be relatively similar to OS such as Linux, although differ in the depth of execution.
- Discrete Structures module is well received by students, as indicated by post-survey results.
- Further work on assessment and promotion to other institutes for use in their CS/CSE/CE courses.
