

Report Immunizations

Reporting complete patient records ensures all information is available to make accurate assessments.

Manage Patient Status

Confirming your patient population is up to date prevents over representation on coverage reports which may lead to lower coverage rates for your practice.

Correct Data Errors

Look at your data. If it looks wrong, fix it. Quarterly data quality checks are vital to ensuring high quality data.

5 Top Strategies to Improve Immunization Coverage Rates through the MIIS

Add Clinical Comments

When appropriate, enter clinical comments in the MIIS. Patients who have immunities will not be counted as incomplete when determining your coverage rates as these patients will not be identified by the MIIS forecasting module as requiring vaccination.

Still Need Help?

Call the MIIS Helpdesk 617-983-4335

Manage Duplication Queues

Reviewing your practice's patient de-duplication queue and merging records that you know are for the same patient, will decrease the number of patients assessed for coverage.
