

First Name	Last Name	Company Name	Abstract title	Poster Nr
Luis	Alonso Baez	Norwegian University of Science and Technology	In vivo mapping of dynamic mechanical properties during root development and stress responses in arabidopsis	16
Bella	Archibald	Stanford University, Brophy Lab	Engineering Plant Root Development using Genetic Circuits	17
Luca	Argirò	Max Planck for Plant Breeding Research	Understanding the genetic basis for clonal growth in an arabidopsis relative	18
Arif	Ashraf	University of British Columbia	Nuclear movement during plant growth and development	2
Bas	Bargmann	Virginia Polytechnic Institute and State University	Plant Regeneration: To Cell and Back	1
Amina	Chaudhry	Rutgers University - New Brunswick	TASSEL SHEATH1's Cis-Regulatory Dissection for the Modulation of Maize Inflorescence Architecture	19
Si	Chen	Cornell University	Fibrous Network Nature of Plant Cell Walls Enables Tunable Mechanics for Development	20
Hongchang	Cui	Florida State University	Devil-like small peptides in plant growth and morphogenesis	21
Erin	Doody	Sainsbury Laboratory Cambridge University	MADELEINE, a flavanol UDP-glucosyltransferase, is necessary for the correct differentiation of bullseye epidermal cells in the Hibiscus trionum petal	22
Idan	Efroni	The Hebrew University	Remodeling of the sugar transport machinery guides carbohydrates recruitment for wound repair	23
Joel	Erberich	Stanford University	SPEECHLESS duplication in grasses expands potential for environmental regulation of stomatal development	24

Flor	Ercoli	University of California Davis	Tyrosine-sulfated peptide-induced flavonol biosynthesis controls elongation and differentiation in Arabidopsis primary root	3
Lukas	Evans	Cornell University	Positional cell divisions, growth, and recruitment contribute to cell-fate acquisition at a developmental boundary in the maize leaf	25
Michelle	Facette	University of Massachusetts, Amherst	Potential conserved roles for related LRR-RLKs during formative asymmetric cell divisions across species	26
Jim	Fouracre	University of Bristol	The role of the miR156-SPL network during land plant evolution	27
Alice	Gevorgyan	Stanford University	Controlling lateral root development to determine the impact of root system architecture on plant biomass	28
Akshay	Gokulendran Nair	Vib-ugent centre of plant system biology	Root-specific xylem scRNA-seq analysis identifies ZHDs as a novel regulator of primary xylem development	29
Isabel	Goldaracena	Stanford University	Engineering Multi-Input Protein Logic Gates For Programmable Gene Expression Control In Plants	30
Alexander	Goldshmidt	ARO Volcani	The TALE of Fleshy Fruit Development: Interplay Between KNOX-II and BEL-like genes in Tomato	31
Camila	Goldy	ENS de Lyon	The actin cytoskeleton is required to maintain the cell division orientation against the cellular geometry	6
Yan	Gong	Harvard University/UC Berkeley	Decoding the Cellular and Genetic Basis of Nectary Development in Aquilegia	32

Herenia	Guerrero	Centro de investigacion y de estudios avanzados del instituto politécnico nacional	BOL as a transcriptional regulator of multiple bioprocesses during cellular reprogramming and new organ formation in Arabidopsis	33
Bruno	Guillotin	IPS2-CNRS	A temporal map of division, chromatin modification, and identity specification in the regenerating root	5
Olivia	Hazelwood	University of British Columbia	Cell cycle follows “pause and play” mechanism in environment stress recovery in diverse plant species	34
Isabella	Higgins	University of Pennsylvania	Brachypodium distachyon HD-ZIP III Transcription Factors: A New Model to Improve the Resilience of Crops to Climate Change	35
Lanxi	Hu	Cornell University	Heterogeneous cell growth generates robustness of morphogenesis to external perturbation	8
Tian	Huang	University of Pennsylvania	A negative feedback loop between TERMINAL FLOWER 1 and LEAFY protects inflorescence indeterminacy	36
Eithan	Hunte	University of Bristol	Investigating the temporal regulation of miR156 expression in Arabidopsis thaliana	37
Dave	Jackson	Cold Spring Harbor Laboratory	TERMINAL EAR1 controls maize development through translational control of developmental mRNAs, and integrates development with abiotic stress responses	9
Tilman	Jacob	Martin-Luther-University Halle-Wittenberg	Root thermomorphogenesis is mediated by cell cycle-activating kinase target of rapamycin	38
Katie	Jeal	Sainsbury Laboratory Cambridge University	Investigating conserved awn and leaf developmental programs in barley	39

Yohan	Jeong	DGIST	MYB74 transcription factor guides de novo specification of epidermal cells in the abscission zone of Arabidopsis	40
Thanduanlung	Kamei	University of Delaware and University of Missouri	SBP mutants have an expanded competence zone for brace root initiation	41
Sunil	Kenchanmane-Raju	Botany and Plant Science	Cellular retooling in organ body plan elaboration	42
Daniel	Kierzkowski	University of Montreal	Auxin modulates developmental gradients to shape leaf-like organs in moss	43
Adam	Kranz	University of New Mexico	Transcriptional signals indicate diverse meristem maintenance strategies in arthropod-induced plant galls	44
Michael	Lach	Weizmann Institute	The gradual conversion of the tomato apical meristem into a flower	45
Laura	Lee	New York University	Glutathione accelerates the cell cycle and cellular reprogramming in plant regeneration	11
Penelope	Lindsay	Oregon State University	Antagonistic interactions between CLAVATA receptors shape maize ear development	46
Wu	Liu	CAS Center for Excellence in Molecular Plant Sciences	MpANT regulates the Meristem development in Marchantia polymorpha	47
Jennifer	López Ortiz	University of Helsinki	Changing the shield: from endodermis to phellem	12
Bethany	Lunsford	UMass-Amherst	Investigating the Role of GHR1, a Receptor-Like Pseudokinase, in Asymmetric Cell Division	48

Imani	Madison	North Carolina State University	Opening The Gates To Plant Cell Communication	13
Conchi	Manzano	HHMI and UCDavis	SlEXO1 Modulates Cortical and Exodermal Cell Identities and Apoplastic Barrier Formation in Tomato Roots	14
Jesus	Martinez-Gomez	University of California Santa Barbra	Genetics of floral ultraviolet pigmentation variation in the yellow monkeyflower <i>Mimulus guttatus</i> .	49
Maria Camila	Medina Montes	Oregon State University	Making good connections: How transverse veins span the maize leaf vascular network	50
Heather	Meyer	Syracuse University	Intrinsically disordered proteins as thermosensors	51
Ya	Min	University of Illinois Urbana Champaign	The Moment Symmetry Breaks: Spatiotemporal Dynamics of CYCLOIDEA Expression During Early Floral Development	52
Andrew	Muroyama	UCSD	Mechanical cues orient symmetric cell divisions to pattern stomata across eudicots	10
Zoe	Nemec Venza	RDP Lab, ENS de Lyon	Cells at the root surface use mechanical cues to activate edge-based growth control in Arabidopsis	4
Lily	O'Connor	Donald Danforth Plant Science Center	Supporting the next generation: bHLH transcription factor complexes regulating maize anther development	53
Jessica	Orr	University of British Columbia	Nucleus follows an internal cellular scale during polarized root hair cell development	54
